

Mietz is looking for you!

Senior Software Engineer

✉ apply@mietz.app

🕒 Full time

👤 Ken Kretschmann

About us 🤖

Our [Mietz App](#) revolutionizes the rental process! No more endless emails, no more annoying paperwork and above all, finding or renting an apartment quickly and easily is our mission. Our software brings the fun back to apartment hunting for private individuals and accompanies professional landlords in the digitalization and automation of their processes.

Our offer 🥰

- Exciting projects and challenging tasks with plenty of room for creativity and personal responsibility
- A motivated, young and dynamic [Team](#) from all over the world
- Drive for professional & personal growth in an expanding company
- Beautiful office in the heart of Prenzlauer Berg
- Creative thinking and new opinions are welcome
- Insight into the start up world & access to our network
- Being actively involved in shaping the success of the company
- Berlin or remote, both is possible
- An attractive salary and flexible working hours

Your Tasks 🐱

- Build new features, measure the impact, improve based on learnings
- Establish engineering best practices, optimize performance and loading times, apply security updates, participate in code reviews
- Collaborate with different internal and external stakeholders for integrations and knowledge sharing
- Implement highly scalable backend systems with state-of-the-art technologies

- Work closely with Product Design & Product Management, designing & delivering experiences for big Real Estate Companies
- Manage your service from architecture design to testing, deployment & operation in an agile environment
- Contribute to inspiring & connecting our engineering team while ensuring smooth delivery & continuous improvement
- Contribute to our growing tech community and encouraging knowledge sharing

Your Skills 🧑‍💻

- 5+ years of practical experience as a Software Engineer
- Full-stack Developer, ideally focus on Backend
- Advanced knowledge of common mobile technologies
- A self-driven Engineer who shares our passion to revolutionize the rental experience.
- Experience building, deploying and operating large scale data-driven systems in a cloud environment
- Ability and eagerness to understand the business context where the team operates and the customer problems being solved Passionate problem solver who puts the needs of customers first
- Effective communication skills in English

Technologies 🐱

- Backend: TypeScript, Node.js, Apollo, AppSync (being deprecated),
- PostgreSQL, Lambdas
- Infrastructure: AWS, Terraform

So if you feel like diving into the PropTech world and at best could start right away, we are looking forward to your application! Send us a message to apply@mietz.app and tell us about your previous experiences and your motivation.
